Trading day ends: the engine moves to CLOSED
pm-scheduler sees the engine confirm CLOSED and waits 30 seconds
pm-clearing sees CLOSED, saves every position at the closing price (the 'close snapshot')
ready by now
pm-scheduler starts pm-eod run --pending
1. gate: is the day really closed and do the books agree?
2. settle: work out what each trader owes or is owed
3. report: write the statements
4. audit: compress old audit files
5. logs: compress old log files
6. backup: copy the databases
