A GUI cannot reach the backend
Does the backend container resolve?
no
yes
Different Compose projects. Check you passed the same -f set; COMPOSE_PROJECT_NAME must match
Does the port accept a connection?
ECONNREFUSED
timeout
connects
What does the compiled config say it binds?
Firewall or a wrong host — a refused port answers immediately
Does the application still report an error?
127.0.0.1
0.0.0.0
401 / 403
protocol-level
Something narrowed the bind. Check EDUMATCHER_GATEWAY_BIND_HOST in the container env, then bind_address: in the supplied configuration
The process is not running. make status, then the process log under data/emo/
Wrong API key or wrong gateway instance. The read-only key lives on 8081, not 8080
Application layer — read the bridge log, not the network
